

The Tiled Roofing Consultancy

NEW

Rooftilefix

When all you have is a roof tile in your hand, and you need to know what fixing specification to write into a specification or quotation, The Tiled Roofing Consultancy can take that tile, and with site and building data supplied by you, undertake the BS 5534 calculations needed to produce a nail or clip fixing specification.

The calculation turn-around is relatively quick, as a new computer program is used, similar to those used by the major UK roof tile manufacturers, but with the added advantage of allowing new tile data to be added quickly.

This service is not intended for roof coverings where the manufacturer offers a free fixing specification service for their products. This is specifically for those roof coverings where the manufacturer does not have the facilities to provide a fixing specification service.

Notes

- 1 Some of the questions may not apply to your project, so answer as many questions as you can.
- 2 If you have any roof plans or elevations, please include them.
- 3 Roof zone is a name that you provide. It may be "Low level rear extension" or "Main roof to block 3", the choice is yours.
- 4 Please supply a sample tile with this sheet of data, unless we have stated that we have the tile on our database already
- 5 The more complete and more accurate your answers, the quicker and cheaper we will be able to complete the calculations/fixing specification for you.
- 6 If you need a particular piece of data included in the printout please let us know so that we can include it for you.
